

Business Requirements Document (BRD)

Tata Play

Document Version: 1.2 | Date: September 17, 2026 | Status: Draft

Design: FigJam Login Revamp - Manage LIT Section (Change Plan + Cancel Plan)

Design URL: <https://www.figma.com/board/psByt5QSY6vvmuAOmExFz7/Login-Revamp>

1. Executive Summary

Tata Play Fiber (TPF) is launching **LIT (Live Internet TV)** - a value-added subscription service that delivers live television channels and bundled OTT content over the internet to existing fiber broadband customers. LIT is positioned as an add-on to the core fiber plan, with subscription validity aligned to the customer's fiber plan lifecycle.

The **Manage LIT module** documented in this BRD enables existing **Fiber + LIT subscribers** to independently manage their Live Internet TV subscription within the Tata Play Fiber Mobile Application (MAPP). This includes viewing their current LIT plan details, changing their channel pack (upgrade, downgrade, or swap), browsing included channels by language and genre, reviewing pricing with proration, and cancelling their LIT subscription - all without contacting customer support.

This document serves as the single source of truth for product, design, engineering, and QA teams. It combines:

Business rules from the MAPP LIT Integration Scenario Matrix (22 scenarios)

UI/UX specifications from the FigJam design board (Manage LIT section - Change Plan and Cancel Plan flows)

Technical integration requirements across MAPP, HOBS, and the LIT platform

The Manage LIT experience is accessed from the MAPP Home screen via a new **"Manage live TV"** quick action tile, which presents subscribers with a choice to either change their existing LIT plan or cancel it entirely.

2. Background & Problem Statement

2.1 Current State

Today, Tata Play Fiber customers subscribe to internet-only plans through MAPP. Live TV and OTT content are not natively manageable within the fiber app. When LIT is introduced as an add-on, subscribers who purchase it need a self-service mechanism to:

Understand what channels and content are included in their current LIT pack

Modify their LIT plan (add/remove languages, change channel tiers, upgrade or downgrade)

Cancel LIT without cancelling their core fiber connection

See transparent pricing including network fees, prorated charges, and total payable amount

2.2 Problem Statement

Without a dedicated Manage LIT journey in MAPP, LIT plan changes and cancellations would require:

Contact center intervention (increasing operational cost)

Redirection to external portals (poor customer experience)

Manual order processing in HOBS (error-prone, slow fulfillment)

2.3 Proposed Solution

Integrate a **Manage LIT module** within MAPP that:

1. Surfaces LIT management from the Home screen Quick Actions

2. Presents a guided, multi-step plan change flow (language selection -> channel browse -> plan review -> summary -> payment)

3. Provides a clear, empathetic cancellation flow with explicit content-loss warnings
4. Orchestrates orders through HOBS using established Add/Remove order patterns
5. Maintains billing alignment between Fiber and LIT subscriptions

3. Business Objectives & Success Metrics

4. Scope

4.1 In Scope - Manage LIT Module (Primary Focus)

4.2 In Scope - Supporting Backend Scenarios

4.3 Out of Scope

See Section 20 - Out of Scope.

5. Stakeholders & RACI

R = Responsible, A = Accountable, C = Consulted, I = Informed

6. Definitions & Acronyms

7. User Personas & Segments

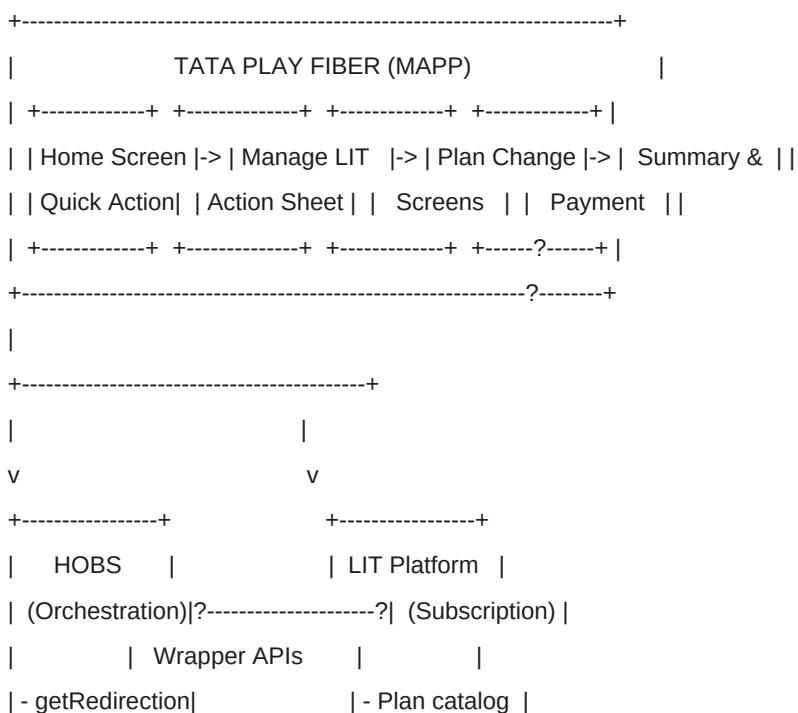

7.1 Primary Persona: Active LIT Subscriber (Manage LIT Target User)

7.2 Secondary Persona: Price-Conscious Downgrader

7.3 Customer Segments & Manage LIT Eligibility

8. High-Level Solution Overview

8.1 System Architecture

- submitOrder	- Pricing/NCF
- Entitlements	- Proration
- Profile sync	- Callback
+-----+	+-----+

8.2 Manage LIT Integration Pattern

****Change Plan Flow:****

1. Customer taps "Manage live TV" on Home -> MAPP shows action selector
2. Customer selects "Change plan" -> MAPP calls GET /lit/manage/getRedirectionUrl
3. HOBS returns secure redirection URL -> MAPP opens LIT platform (in-app webview or native)
4. Customer selects languages, browses channels, reviews plan on LIT/MAPP screens
5. LIT returns selection via callback -> MAPP receives pack details, pricing, proration
6. Customer reviews Summary screen -> taps "Proceed to pay"
7. MAPP calls submitOrder with Add/Remove actions (I for new pack, O for old pack)
8. HOBS fulfills order -> LIT Modify Plan processed -> entitlement updated
9. MAPP shows confirmation -> updated plan reflected on Manage Plan overview

****Cancel Plan Flow:****

1. Customer taps "Manage live TV" -> selects "Cancel plan"
2. MAPP shows cancellation confirmation bottom sheet with content-loss warning
3. Customer taps "Yes, Cancel My Plan"
4. MAPP calls submitOrder with Add/Remove action O
5. HOBS unsubscribes LIT -> suspends entitlement immediately
6. MAPP shows success screen -> LIT no longer visible as active service

9. Functional Requirements

9.1 Manage LIT - Core Requirements

9.2 Supporting Functional Requirements (Backend Scenarios)

10. Manage LIT - Detailed User Journeys

10.1 Journey A: Change LIT Plan (Happy Path)

****Actor:**** Rajesh (Fiber + LIT subscriber)

****Precondition:**** Active fiber plan (200 Mbps), active LIT pack (130 channels, Rs.399/month), app logged in

****Goal:**** Add Tamil language channels to existing Hindi + English pack

****Postcondition:**** LIT pack updated to 534 channels including Tamil. Fiber plan unchanged. New validity aligned.

10.2 Journey B: Cancel LIT Plan (Happy Path)

****Actor:**** Priya (Fiber + LIT subscriber)

****Precondition:**** Active fiber + LIT, wants to cancel LIT to save money

****Goal:**** Cancel LIT subscription while keeping fiber active

****Postcondition:**** LIT subscription cancelled. Fiber plan remains active. LIT entitlement suspended immediately.

10.3 Journey C: LIT Upgrade with Proration

****Actor:**** Rajesh

****Precondition:**** Mid-cycle on 6-month LIT pack, wants to upgrade to premium pack

****Goal:**** Upgrade LIT pack and pay only the prorated difference

10.4 Journey D: Cancel Abandonment

****Actor:**** Rajesh

****Precondition:**** Initiated cancel flow but changed mind

11. Screen-Level Specifications (Manage LIT)

SCR-M01: Home Screen - Quick Action Entry

SCR-M02: Action Selector (Bottom Sheet)

SCR-M03: Manage Plan Overview

SCR-M04: Language Selection

SCR-M05: Your Channels (Browse & Search)

SCR-M06: Plan Details (Review)

SCR-M07 / SCR-M08: Summary (Collapsed & Expanded)

SCR-M09: Payment

SCR-M10: Cancel Confirmation (Bottom Sheet)

SCR-M11: Cancel Success

12. Business Rules & Constraints

13. Pricing, Billing & Validity Logic

13.1 Price Components

13.2 Proration Rules

13.3 Validity Alignment

LIT subscription end date = Fiber plan end date (for bundled customers)

On fiber plan change: LIT validity is re-aligned to new fiber plan end date (LIT pack itself unchanged)

On fiber renewal: LIT renews alongside fiber (combined price from `getEndUserDetails`)

On LIT cancellation: LIT entitlement ends immediately; fiber validity unaffected

14. API & Integration Requirements

14.1 HOBS LIT APIs

****Base URL (UAT):**** <https://apiuathobs.tataplayfiber.co.in>

14.2 MAPP APIs

14.3 API Sequence - Manage LIT Change Plan

Customer	MAPP	HOBS	LIT Platform
--Tap Manage---?			
	--GET entitlement-?		
	?--pack details----		
?-Show Plan----			

```
| | | |
|--Change Plan--?| |
| |--GET redirect URL?| |
| |--URL + token----| |
| |--Redirect-----?| |
|?-----Plan selection UI-----|
|--Confirm-----?|
| |--Callback (pack, price)----| | |
|?--Show Summary-| |
|--Pay-----?| |
| |--POST submitOrder?| |
| | |--Modify Plan-----?| |
| | |--Entitlement upd--| |
| |--Order confirm---| |
|?--Success-----| |
```

14.4 API Sequence - Manage LIT Cancel Plan

Customer	MAPP	HOBS	LIT Platform
--Cancel Plan--?			
?-Confirm Sheet			
--Yes Cancel---?			
	--POST submitOrder-?		
	(action: O)	--Unsubscribe-----?	
		--Suspend entitlement?	
	?--Order confirm---		
?-Success-----			

15. Data Fields & System Mapping

15.1 LIT Entitlement Object (from HOBS)

15.2 LIT Callback Payload (LIT -> MAPP)

15.3 Submit Order Payload (MAPP -> HOBS)

16. Error Handling & Edge Cases

17. Non-Functional Requirements

18. Assumptions & Dependencies

18.1 Assumptions

1. LIT platform is operational and provides stable redirection and callback mechanisms at launch
2. HOBS wrapper APIs will be deployed to UAT at least 2 weeks before MAPP frontend integration begins
3. Fiber plan expiry date is the authoritative source for LIT validity alignment

4. Proration logic is owned and calculated by the LIT platform; MAPP is a display layer
5. FigJam design (Manage LIT section) is approved and final for development
6. Payment gateway supports LIT-specific line items without modification
7. Channel logos and language icons are provided by LIT/Content team in required formats

18.2 Dependencies

19. Open Questions & Pending Decisions

20. Out of Scope

Combined Fiber + LIT plan change in a single transaction

Combined Fiber upgrade/downgrade + LIT upgrade/downgrade in a single transaction

LIT access for suspended (paused, not resumed) customers

FDO-based future-dated LIT plan changes

Modifications to one RMN, ownership change, and relocation journeys (BAU)

LIT Manage and Remove actions in recharge-for-others journey

LIT first-time purchase UI (documented in scenario matrix; separate design flows)

LIT nudge/promotion overlay screens (separate design section)

Web portal access for Manage LIT (mobile app only for this release)

Multi-screen/stream concurrency management (shown in design but not in Manage LIT scope)

21. Acceptance Criteria & Test Scenarios

21.1 Manage LIT - Functional Test Scenarios

21.2 General Acceptance Criteria

Appendix A - Full Scenario Matrix

Appendix B - API Catalog

B.1 HOBS LIT APIs (UAT)

Base: <https://apiathobs.tataplayfiber.co.in>

GET /lit/subscribe/getRedirectionUrl - New LIT subscription redirection

GET /lit/manage/getRedirectionUrl - Manage/change plan redirection

GET /lit/getSubscriberEntitlement/{id} - LIT entitlement for subscriber

GET /lit/packtochannel/{packName} - Channels in a LIT pack

POST /lit/lit/updateSubscriberProfile - Sync RMN/email to LIT

B.2 Additional Entitlement API

GET <https://apiathobs.tataplay.com/SubscriberServices/subscriberEntitlements>

B.3 Existing MAPP/HOBS APIs (Modified)

POST submitOrder - LIT add-on orders (I/O), Change Package

GET getEndUserDetails - Combined Fiber + LIT renewal pricing

GET getSubscriberDetails - Include LIT Subscriber ID

B.4 New MAPP API

POST [TBD]/lit/callback - Receive LIT platform response post-redirection

Appendix C - UI Copy & Messaging Reference
